

modell-tec
D/S SKIBLADNER 1/60

	PRIMER	GRUNNING
	CLEAR WARNISH	KLAR LAKK
	WHITE	HVIT
	BLACK	SVART
	YELLOW	GUL
	RED	RØD
	BROWN	BRUN
	BRASS	MESSING

1

Attach the keel as seen on the picture with keel locks.
Sett sammen kjølen ved hjelp av kjøllåsene 5.

Settle the No: 7,8,9,11,12 and 13 frames into the base part No:24, then set them onto the keel.

Plasser bunnplaten 24 inn i spantene 7,8,9,11,12 og 13.
Deretter monter dem i posisjon på kjølen.

3

Sand the nose of the keel like a knife shape at the tip highlighted in the pictures.
The Ship's nose should be almost a knife edge.

Puss kjølen foran slik at den blir spiss.
Baugen skal være spiss som en kniv.

4

5

Do not glue the locks before ensuring they are settled right.

Ikke lim de langsgående låsebjelkene før du er sikker på at de står i riktig posisjon.

Rudder shaft pipe should not be glued shaft.
Glue it only to the house parts No:31.

Rorhylseholderne (31-33) limes til kjølen bak, men ikke hylsen.

6

You can skip these sections If you build static model.
Skal modellen din være en statisk modell, uten motor, kan du hoppe over de neste motorpunktene.

7

Fix the motor to the motor bed with the screws.

Monter motor i holderen med de to skruene.

Hammer gently the screw gear into the bearing

Monter forsiktig girakslingen inn i lageret.

8

RC-10

Be sure RC-1 main gear is in the middle and tangent RC-2 screw gear.
Then you can glue RC-1 at the axle with a strong glue.

Pass på at RC-1 hoved gir står midt på skovleakslingen RC-2.
Lim disse med Epoxy lim.

Set the servo wire as seen on the picture.
Monter styrestag mellom servo og rorarm.

Put 1-2 kg ballast to balance the model. The ballast center should be below and middle.
The model's balance is very sensible at sides, so ballast should be placed very careful.

Gjør plass til 1-2 kg. ballast i senter av båten under dekk.
Modellens balanse er svært sensibel sidevis, så plasser ballasten med omhu før skroget lukkes.

Do not glue PW-7 to reach the rudder connection If needed anytime.
Ikke lim PW-7 dekkplate bak, slik at du kommer til rorkobling senere.

13

12

Do not use the No:21 if you build R/C model.

PW-3 and PW-4 decks should be supported by beams and these decks should not be glued on the construction hull If you build R/C model.

PW-3 og PW-4 skal monteres på tverrgående bjelker.
Dekkene skal ikke limes om modellen skal utstyres med fjernstyring.

14

15

Cover the bottom deck with S-4 cover strips.
Kle hoveddekket med S-4 dekkslister.

S-4

PW-47

20

FLX-1

Keep FLX-1 in the water for 20 min have it is flexible.
Then gently lean its place and bent slowly. Repeat it
couple of times to ease its place.

Legg FLX-1 i vann i ca. 20 min. for å gjøre den mer fleksibel og bøyelig.
Bøy sakte og plasser den forsiktig. Prøv flere ganger for å få den riktig på plass.

16

PW-48

PW-54

P-16

Break off the circled area after installing the panels.
Then place the laths through that gap.

Brekk av støttene på spantene (vist med sirkel)
og monter listene i spalten.

22

PW-64

S-2

S-2

S-1

Keep PW-63 in the water for 20 min have it is flexible.
Then gently lean its place and bent slowly. Repeat it
couple of times to ease its place.

Det samme for PW-63.

17

PW-63

18

PW-49

PW-50

P-15

Glue the glasses with clear cement after
placing the panels.

Lim glassene P-15 med klar lim.

19

P-15

S-3

23

Break off the blue highlighted frame tips gently.
Fjern forsiktig toppen på de blå fremhevede spantene.

Cover the hull with S-3 strips and one strip on each side
everytime.
The keel might turn to any side, to avoid it, please check
the keel after every single covering strip.

Kle skroget med S-3 lister, alltid en på hver side om gangen.
Dette for å unngå at kjølen slår seg og det lange skroget blir skjevt.
Sjekk etter hvert par av lister.

32

33

36

34

35

You need to screw the additional rudder for R/C model while running in the water.
Monter det ekstra, litt større, roret når båten skal brukes på vann.
Det gir bedre styring enn det originale.

Oppsett LED belysning

På denne siden ser du hvordan du setter opp lys. Alle LED lysene er koblet i serie av 3 stk. Lys-settene består av 3 serier på hvert dekk. Kobberledningen er isolert i endene, skrap eller brenn isolasjonen vekk før kobling. Enden av motstand er ikke viktig. Hvilken som helst ende kan kobles til serieleds.

Uansett hvor du velger å ha LED lys, bor 3mm hull for LED-pærene i holderlistene og sett LED lyset oppi den. Bruk litt lim for å feste det på plass, men vær forsiktig med limingen.

Test LED-ene på hvert nivå, se om de virker. Hvis de blinker, har ikke strømkilden nok amper. Hvis det ikke kommer lys i det hele tatt, sjekk om isolasjonen på ledningene er fjernet helt eller om de er frakoblet.

Ledninger og andre komponenter skal kobles ved lodding. Hvis du ikke er ekspert på det, få hjelp av noen som kan det. Selv om isolasjon på kobberledningen er fjernet, kan den bli slitt etter viss tid. Hvis den er i kryss enkelte plasser, isoler eller sett en liten ting for å skille ledninger fra hverandre for å unngå kortslutning.

Etter hvert kan det være at noen LED lys går, test da den serien som disse lysene og motstand hører til. Hvis du ikke har utstyret for å gjøre det, bytt da ut de tre lysene og motstand det gjelder.

Samle dekk ledninger i enden av en plugg. Den andre enden av pluggen skal kobles til strømkilden. Gjør det for hvert dekk i tilfellet det må fjernes senere. Det blir da lettere å ta dekkene ifra hverandre ved å plugge ifra leddkoblinger og frigjøre dekkene.

Pass på at (+) og (-) er riktig ved kobling.

Strømkilde som batteri, oppladbar akku eller adapter er ikke inkludert i settet.

LED SET-UP

You will find out how to set lights up in this page. The first rule is each 3 leds connected serial. So, the light sets exist bunch of 3 serials in every deck. Cooper cable is isolated, so when you set it, sand or fire the tips to unisolate. The tip of the resistance is unimportant. Any tip can be connected to the serial leds.

Wherever you would like to put a led, penetrate 3 mm the led platform and place the led into. Then glue the led there but do not use over the glue, just tiny.

Test the leds on every stage If they work properly. If the leds are blinking, the energy source's amper is not enough. If there is no light at all, then check cables these might not be unisolated well or disconnected.

Connect the cables and the other components soldering. If you are not expert on soldering, get and support from an expert.

Though the cooper wire is unisolated, it might lose its feature by the time. If they are cross anywhere, put a small separator to keep it away from short circuit.

By the time, some leds might be died. In this situation, test the serial that covers that led and resistance. If you do not have a equipment to test, then just swap those 3 serial leds and resistance with new ones.

Collect the deck cables into a tip of a jack. The other tip of jack should connected to the energy source. You do this for every deck it might be needed to remove. It is going to make easier to disattach the decks. Easily you will plug off the led connections to make free the decks. Watch out collecting (+) and (-) will be right.

- ❖ Please read the instructions carefully before you start to build your model. Take notes if needed. So, you may find out the materials and the tools those you need.
- ❖ Use model knife to take out the parts the plywood sheets. Do not take them out with hand!
- ❖ Change of temperature effects on plywoods quickly. So that, do not release the plywoods. Keep them on a flat surface by putting weight on them.
- ❖ You may stick together the wooden parts easily if you sand the brown areas caused by laser with sand paper.
- ❖ You should use super glue and white glue to stick together the wooden parts and use the super glue for metal parts.
- ❖ Building the keel of your model, before stick the frames, be sure the frames properly seated on the keel. Otherwise you can't build the body of the model rightly. Exactly be sure that left and right side of the frames are compatible and symmetrical.
- ❖ After building the keel of your model, before the covering, you should test the frame edges by a cover strip. You should sand with a piece of sandpaper the frame edges at the right degree to touch the strips on to the surface exactly. The curves are mostly the front and back side of the body.
- ❖ You should keep the strip tips in the bowl filled with water approximately one hour. So that you may curve the strips on the curves easily these are mostly at the end and the front of the hull.
- ❖ You should cover the strip starting from the top for each side symmetrically.
- ❖ You should cut the upper side of the strip when overlap occurs especially at the front curve of the body.
- ❖ To make equal the surface of the body that caused by planking, you should sand with a piece of sandpaper (Firstly you should use thick sandpaper, then you can apply thin sandpaper), . You should fill the gaps after this processing. You may use leftover strips for wide gaps and model putty for small gaps.
- ❖ If you don't want to appear wooden tissue of the body of your model body; first, apply filler undercoat then sand with a thin sandpaper to make it ready to apply putty. Apply putty whole body and sandpaper again. Apply one more coat filler undercoat and sandpaper. You should not use very thick sandpaper to sand the putty and filler undercoat. You should repeat this process until you get the results as you want. You should apply undercoat paint to find out if any mistake appears at the body. The body gets ready for painting after these applications. You may use model brushes for filler coating. In order to understand whether the materials (such paint, filler, undercoat, varnish, etc.) are compatible with each other, you should test on the unnecessary parts.
- ❖ Some of the model's logo, name or the number are produced from decal paper. You should keep them in a bowl filled with warm water for two or three minutes. You should apply them to their places while releasing from their paper. You may attach easily If you apply gloss varnish to the place before applying the decals. You may apply matt, gloss or satin varnish after this application preferably.
- ❖ You should keep your model away from direct sunlight, heat and moist to avoid deformation in the course of time.
